### CHANGES IN LABOUR INCOME SINCE 1926

The purpose of the present article is to review historical trends in labour income, as presented in a forthcoming publication covering the period 1926 to 1958. Glancing briefly at the entire period, there were significant advances in the late 1920's, followed by a severe decline during the depression of the early 1930's. Then came a period of faltering and incomplete recovery, followed by a more rapid rise as the economy reacted to the shock of wartime mobilization. Although levels of labour income have been affected in the post-war period by three comparatively short periods of hesitation or recession, annual totals have moved successively higher ever since 1933. Other major economic indicators have shown a broadly similar pattern of behaviour over time.

The growth of the labour force is of course an important element in the rise in labour income from 1926 to 1958 but the trend toward industrialization also contributed in that a larger proportion of the working population moved into the "paid worker" category. The growth of the labour force was, however, accompanied by a considerable reduction in hours of work; the progress of technology made it possible to achieve both higher real output and more leisure. The sharp rise in labour income in the latter half of the period also reflects the fairly persistent inflationary pressures which have raised the economy to new high levels of wages and prices.

Payments to labour totalled about \$2.4 billion in 1926, the first year of the historical series. Annual increases in employment and wage rates had raised this figure by 1929 to a pre-war peak of \$2.9 billion, but in the next year the series showed the influence of deepening depression. In each of the three years after 1929, the situation deteriorated, and by the middle of 1933 about 19 per cent of the available labour force was unable to find work. Average wage rates as well as employment levels moved lower, and accordingly, labour income fell to \$1.8 billion in 1933, or roughly three-fifths of the 1929 level.

The impact of the depression was general, and payrolls were reduced drastically in all industries. Construction was hardest hit, the wage bill dropping by 1933 to a little more than a fifth of the 1929 figure. Forestry and agriculture experienced declines of about two-thirds and one-half, respectively, and mining of about two-fifths, so that the primary products group as a whole (a tenth of total labour income in 1929) fell by approximately 50 per cent. Firms engaged in manufacturing, which were responsible in 1929 for a little over a quarter of all labour payments, had experienced a 44 per cent cut-back

in payrolls by 1933. In transportation, which was of course seriously affected by reductions in shipments of both primary and manufactured goods, labour income declined by more than 40 per cent. Other industries, including government, trade, communication, public utilities, finance, and some service groups, experienced payroll decreases which were relatively smaller, though nevertheless substantial.

Economic recovery had commenced by 1934. Output had begun to rise again and, concomitantly, labour income started to increase slowly. From an aggregate figure of \$1.8 billion in 1933, the national wage bill advanced to \$1.9 billion in 1934, and then to \$2.1 and \$2.2 billion in 1935 and 1936. By 1937 the figure had reached \$2.5 billion, still substantially lower than in 1929. Payrolls in construction had increased but were well below pre-depression levels, and the same was true of the transportation industry. The 1937 manufacturing wage bill was approximately the same as the 1928 figure but still substantially below that of 1929. At a little over 400 thousand, the number of persons without jobs and seeking work at mid-year had declined markedly from the 1933 peak of about 825 thousand but nevertheless represented 9.1 per cent of the available labour force (the comparable percentages for 1929 and 1933 were 2.9 and 19.3 respectively). Then, in 1938, the upward climb was temporarily halted. The number of persons without jobs at mid-year increased to about 520 thousand and the Gross National Product failed to advance significantly above the level of the previous year, in either value or volume terms. Similarly, the aggregate of payments to labour was about the same as the year before. In 1939, output and income resumed their upward courses, but elements of weakness were still present. The number of persons without jobs and seeking work was roughly the same as in 1938. At \$2.6 billion labour income had failed by the end of the 1930's to reach the dollar level attained a decade earlier, and it was not until the following year, when the transition to a war-time economy had commenced, that the 1929 figure was surpassed.

Prices had fallen rapidly at the beginning of the depression. With the gradual improvement in the economic situation after 1933, they had risen gradually but by 1939 were still far below the 1929 level. The consumer price index (1949 = 100) was 76 at the end of the 'twenties and only 63 at the end of the 'thirties. On this basis, then, although the 1939 labour income total was lower than the 1929 total in actual dollar terms, in terms of purchasing power it was somewhat higher, i.e. wages and salaries represented command over a larger volume of consumer goods, in the aggregate.

During 1940 the economic effects of war-time mobilization were becoming apparent but the full impact of the diversion of productive resources to military requirements was yet to be felt. From about 9 thousand in 1939 (mid-year), armed forces personnel increased to more than 100 thousand in 1940. By 1942 the figure was approaching 400 thousand and by 1944 it had reached a peak of about 780 thousand. Part of the total, of course, consisted of persons who in peace-time would have been enrolled in educational institutions, or otherwise occupied outside the Canadian working force, but the largest part represented a withdrawal from the supply of labour available for civilian employment. As a substantial offset to this, an addition to the working force was provided by housewives, retired persons, and others who normally would have remained outside the economically active population. As a result the civilian labour force was relatively constant in size despite the heavy drain placed on it by military recruitment. However, shifts occurred between the self-employed and paid-worker groups, reflecting the augmented demand for factory products. The paid-worker component of the labour force increased rapidly from 2.2 million in 1940 to 2.6 million in 1941 and by 1944 had reached a war-time peak of almost 3 million, the bulk of the increase taking place in manufacturing. As would be expected under such conditions, the high level of unemployment inherited from the 'thirties dwindled rapidly. From 530 thousand at mid-1939, the number of persons without jobs and looking for work fell to 423 thousand in 1940 and to around 200 thousand in 1941. By 1943 it had dropped to about 75 thouand, or less than two per cent of the civilian labour force.

War-time developments in the labour market were reflected, of course, in the behaviour of the aggregate civilian wage bill. From \$2.6 billion in 1939 the total advanced to a little less than \$3.0 billion in the first full year of the war. Then, in association with the increasing volume of paidworker employment and the prevalence of overtime work, it rose sharply in 1941 to a figure of \$3.6 billion, and again in 1942 and 1943, reaching a level of \$4.8 billion in the latter year. After 1943 the advances were moderate, and a total of \$5.0 billion was recorded in 1945. The bulk of the 1940-45 expansion of labour income occurred in manufacturing. In fact, by the end of the war manufacturing firms had almost tripled their 1939 payroll. Transportation, which of course played a vital role in the war-time economy, had roughly doubled its wage bill by 1945.

The termination of hostilities and the ensuing reductions in military forces released large numbers of persons for entry into the civilian labour force. A good deal of doubt was expressed as to whether the economy would be able to absorb these influent workers at a time when government demand for goods and services was being sharply curtailed. However, the drop which occurred in the physical volume of output during the transitional period was relatively small, and the number of persons seeking but unable to find work rose only moderately in spite of the sharp increase in the labour supply. Wage rates, which had climbed rapidly in the early part of the war but had been rising since 1943 at a more gradual pace, now started to move up quickly. The over-all result was that the nation's wage bill increased in 1946 by \$450 million, and then rose in each of the next two years by roughly a billion dollars per annum, bringing it to a level of \$7.4 billion in 1948. In the final year of the 'forties it had reached \$8 billion or about two and two-thirds times the pre-war peak figure of 1929.1 This notable increase in two decades, all of which had occurred since 1939, and the largest part since the end of the war, was the result of roughly a doubling of wage rates and an increase of about two-thirds in the number of paid workers.

Higher money wage rates were offset in part by the higher prices of consumer goods. By 1945 the consumer price index, which had fallen sharply during the depression, had risen again until it was at approximately the 1929 level. With the progressive removal of war-time price controls, the index rose moderately in 1946, and then more rapidly in 1947. In 1948 it moved upwards very sharply, recording a 14.4 per cent increase over the previous year. An additional small advance in 1949 brought it to a position which was higher than the 1929 and 1945 level by about 33 per cent. Nevertheless, the measure of changes in aggregate real wages and salaries, obtained by dividing labour income (excluding supplementary forms of payment) by the consumer price index, showed a gain of about 92 per cent since 1939, and of roughty 100 per cent since 1929. Paid workers had increased less rapidly over the same periods, and substantial gains in per capita real income are implied.

The period including 1949 and the first part of 1950 witnessed some relaxation of inflationary pressures and some hesitation in the expansion of economic activity. Prices and wage rates were still climbing but at reduced rates, and as the labour force continued to grow, the number of persons without jobs rose a little. Nevertheless, the national wage bill increased by about \$500 million in 1949 (excluding Newfoundland), and by another \$600 million in 1950, to a total of \$8.6 billion. Then, with the fillip provided by the outbreak of hostilities

<sup>&</sup>lt;sup>1</sup> About 100 million dollars of the 1949 total is attributable to the inclusion, for the first time, of Newfoundland.

in Korea, inflationary tendencies again appeared. Wage rates advanced very rapidly between 1950 and 1951, and then increased more moderately in 1952 and 1953. Labour income rose by about \$1.5 billion from 1950 to 1951, and increases of roughly a billion dollars in each of the next two years brought the total to \$12.1 billion by 1953.

In 1954, evidence of a recessionary movement showed in annual statistics for the first time in the post-war period. The physical volume of national output declined for the first time since World War II, and, in spite of a relatively small increment to the labour force, the number of persons without jobs and seeking work increased markedly to an annual average of about 230 thousand. However, in spite of a drop in employment, increases in wage rates were sufficient to push labour income up to \$12.5 billion. The 1953-54 increase of \$300 million, though, was the most modest in almost a decade.

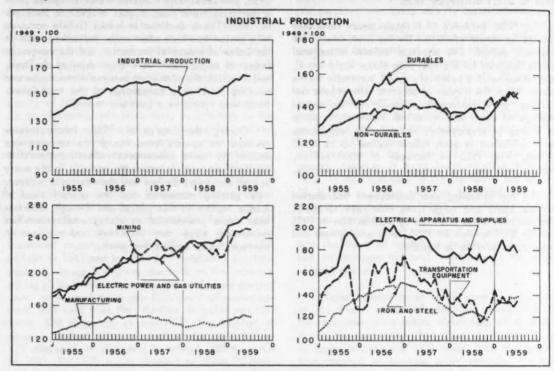

By the following year employment had started to rise again and wage rates continued to climb. The national wage bill rose by \$0.8 billion in 1955 and by \$1.7 billion in 1956, with employment and wage rates moving up rapidly.

A level of almost \$16.0 billion was achieved in 1957, although it was evident in the latter part of the year that the Canadian economy was entering the second post-war period of reduced activity. While annual estimates for that year show a further pronounced gain in labour income (\$1.1 billion) over 1956, the seasonally adjusted monthly figures show a declining trend from August of 1957 to February of 1958. These declines in labour income occurred in a period in which other major indicators such as the index of industrial production and the composite index of employment were also showing declines, and in which the number of persons without jobs and seeking work as a percentage of the total labour force was rising to a post-war record.

During the course of 1958, labour income resumed its upward trend though the upswing was marked by some unevenness reflecting the rather hesitant recovery in economic activity in the early part of that year. By year-end the economic recovery was gaining momentum and the upward trend of labour income in this period and through 1959 has been more pronounced as rising employment has reinforced wage rate increases and changes in average hours worked per week.

### INDUSTRIAL PRODUCTION

From the first to the second quarter, the rise in the total production index was 2.4 per cent. The seasonally adjusted index of industrial production fell slightly in June with declines in manufacturing and mining more than offsetting gains in electrical power and gas output. Total durable manufacturing rose despite the decline in electrical apparatus and supplies; non-durables declined with a majority of its components. The decline in mining was concentrated in the metal mining component.

## EMPLOYMENT AND AVERAGE HOURS WORKED

The main factors contributing to the increase in the June seasonally adjusted index of industrial composite employment were gains in forestry, durable goods manufacturing, and construction employment. Seasonally adjusted average hours worked remained high in June and as a result the second quarter exhibited a gain over the first.

### LABOUR INCOME AND FARM CASH INCOME

Seasonally adjusted labour income rose further in June. Small gains were registered in most industries with particular strength in manufacturing. The gain from the first to the second quarter was 1.4 per cent.

# RETAIL TRADE

Seasonally adjusted retail trade in June fell sharply from an irregularly high May level. All types of retail outlets participated in the decline. Department store sales, while falling, remained at a high absolute level.

### SELECTED GROUPS IN RETAIL TRADE

In spite of the renewed strength apparent in June, seasonally adjusted new passenger car sales in the second quarter were down about 5 per cent from the first quarter. Both clothing and furniture and appliance stores declined in June.

## HOUSING STARTS AND COMPLETIONS

Housing starts in municipalities of over 5,000 declined by 22 per cent between the first and second quarter, but were somewhat higher in July. Completions rose sharply by 29 per cent in the second quarter, reflecting the large number of starts in late 1958 and early 1959; the July figure maintained the second quarter level.

\*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

### **EXPORTS AND IMPORTS AND CORPORATION PROFITS**

Seasonally adjusted exports in the second quarter were up 10 per cent above the first, but showed a decline between June and July. The July drop was widespread, with agricultural, wood and non-ferrous commodities bearing the brunt of the decline. Seasonally adjusted imports continued to climb steadily during May with only non-ferrous and miscellaneous commodities registering declines.

Note.— Until the end of 1987, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence Figures for 1988 and 1989 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Not applicable to figures on population and immigration.

(2) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(2) Exclusive of stillbirths.

(3) Immigrant admissions by country of last permanent ranidences. Annual and quarterly figures are totals for the period.

(3) Secure: Sentially Report of Vital Statistics, D.B.S. and Department of Citizenship and Immigration.

Nors: The quarterly data for the years 1956, 1957 and 1956 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1928–1986", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956 and the first two quarters of 1956 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

O'The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for carnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. O'Includes adjusting entry. O'Includes residual error of estimate. O'This item differs from column 5, bottom of page 6, in that it satisfies undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-582) "Revised Index of Industrial Production, 1255-57."

O'The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

O'Seasonal (formerly supplementary) benefit data included.

O'On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.

O'The number of new cases of recorded unemployment among insured persons.

O'Commencing with November 1988, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

(1) As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(1) The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

O'In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

O'Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

O'Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

O'Manufacturing inventory owned by manufacturers, held at plant or plant warchouse at end of period. Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

<sup>&</sup>quot;Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

"Total pulp production covers "acreenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and "OCustoms exports.

"Will shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note,—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

(ii) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

"Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying ortaids these municipalities were also chosen for complete enumeration.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1258 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

\*\*O'Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

\*\*Source: Building Permits, Business Finance Division. D.B.S.

(1)The coverage was extended to 507 municipalities in 1948, and as of 1959 stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>60</sup> a)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (a)Planks and boards, flooring and equare timber. (a)Hollow blocks including fireproofing and load-bearing tile. (a)For building insulation only. (a)Figures cover the production of firms which normally account for 89% of total Canadian production.

<sup>\*</sup>See also Tables 18 and 19. \*\*O'Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices. From August 1, 1957 to July, 1959 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, onts and barley. \*\*O'Include subsidy on hogs. \*\*O'Based on price for hogs including Dominion premium. A rise in ratio favours production of becl. \*\*O'Previous to January, 1958, quotations referred to steern up to 1,000 lbs. Now they refer to all weights. \*\*Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Heidings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.

(4) Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

Revised to include bagged seed wheat previously excluded.

(b) Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada.

Data shows for the last three months are not so adjusted.

(b) Annual data are monthly averages of crop year.

(c) Includes eggs for hatching.

<sup>(</sup>i) Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

(ii) Includes stocks held by manufacturers, wholesalers and other warehouses.

(iii) Eggs, dried and powdered.

<sup>(1)</sup>Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (1)As of January, 1958, statistics include the British Columbia Electric Railway. (1)As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. (i)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

(i)The September 30, 1957 and subsequent figures for 'personal averages deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 miltion, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

(ii) Mainly deposits of foreign banks.

(iii) Securities purchased direct from issuer with a term of less than one year at time of issue are classified as leans.

(iii) Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive month.

(iii) The September 30, 1957 and subsequent figures for 'personal avings deposits' excluded at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 and subsequent figures for 'personal avings deposits' excluded at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 and subsequent figures for 'personal avings' personal avings deposits' excluded, the figures prior to September 30, 1957 and subsequent figures for 'personal avings' deposits balances of religious, educational and welfare institutions and the figures for 'personal avings' personal avings deposits' excluded at that time in the returns of the banks to the Department of Finances. The figures prior to September 30, 1957 and subsequent figures for 'personal avings deposits' excluded at that time in the returns of the banks to the Department of Finances of The September 30, 1957 and subsequent figures for 'personal averages averages of the second averag

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 59 per cent of new ordinary insurance sales.

OTHe Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to set profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

Ol Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

Rubber, Leather, Non-Metallic minerals, Potroleum and Coal and Miscellaneous Manufacturing Industries.

Seurce: Quarterity Corporation Profits, D.B.S.

Norm: Symbols used: Throughout the Review (...) means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (\*) signifies "preliminary" and (\*) indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.

\* Indicates new or substantially revised presentation.

# Canadian Minerals . . . . . . .

have contributed tremendously to the nation's economic development . . . .

In 1886, when systematic data were first collected, minerals were produced to the value of \$10 million . . . .

Now the value exceeds \$2 billion a year, and the mining industry employs 145,000 persons, pays \$600 million in salaries and wages and upwards of \$900 million for materials and supplies. Minerals are a major contributor to Canada's export trade.

The Dominion Bureau of Statistics keeps close tab on the developments in this field and publishes 9 monthly and 20 annual reports on the full range of Canadian minerals. The monthlies provide current production and other data, while the annuals contain detailed statistics on products shipped, employment, salaries and wages, materials and supplies used and other information.

Monthly Reports are issued separately on-

- Gold
   Silver, Lead and Zinc
- Copper and Nickel

- Asbestos
- Iron Ore
- Salt Coal
- Crude Petroleum and Natural Gas
- Leading Minerals

Annual Reports range in coverage from Asbestos to Zinc. A special report contains a chronological record of Canadian mining events from 1604.

A list of DBS publications on Mining and other aspects of the Canadian economy is contained in the Catalogue of Current Publications 1959. Write for a free copy to: Information Services Division, Dominion Bureau of Statistics.
